

dormakaba jay cloud
OnDemand access control
and time recording
with SAP SuccessFactors

Integrate your access control and time recording into SAP SuccessFactors

Easy and secure with dormakaba jay cloud

The cloud-based dormakaba jay cloud software solution enables you to easily organise and manage all your access control and time recording tasks in your SAP system. You control these critical and sensitive business tasks with

maximum ease and security in the SAP SuccessFactors Employee Central, SAP's cloud solution for human resources management.

Co-innovated with SAP

jay cloud was co-developed as a solutions extension for the SuccessFactors Employee Central together with the SAP co-innovation team and support from the SAP OEM team. The application is certified by SAP and is labelled "Co-Innovated with SAP" and "SAP Certified – Built on SAP Business Technology Platform".

Long-standing partnership

As a long-standing SAP partner, dormakaba offers customised solutions for your company. Join a group of more than 2,000 customers worldwide who already put their trust in our SAP solutions. Benefit from full integration of your processes into your SAP system, enabling central data management and automatic, error-free data communication.

Co-Innovated with SAP®

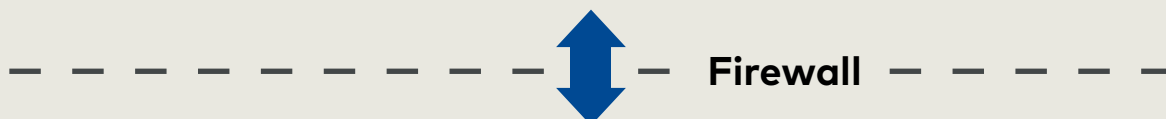

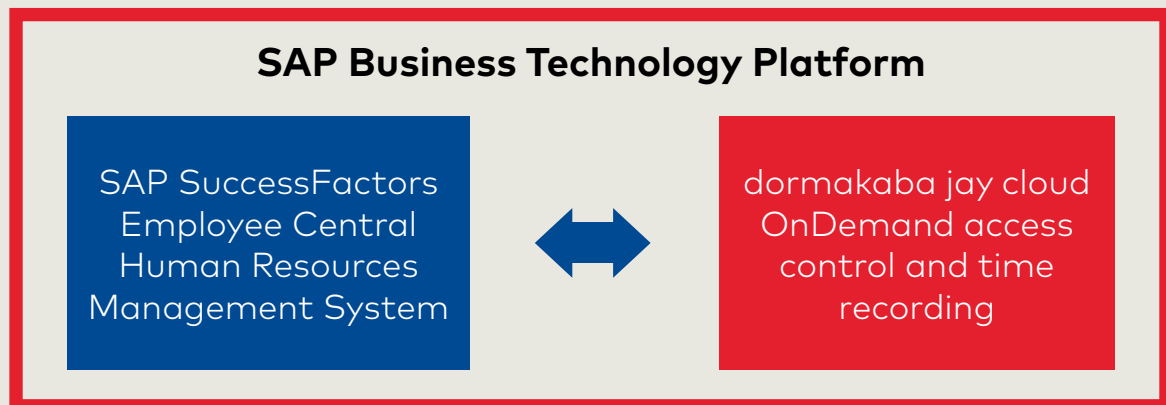

SAP® Certified
Built on SAP Business Technology Platform

Everything under control over the cloud

jay cloud links the dormakaba product portfolio with the SAP SuccessFactors Employee Central – both applications are cloud-based. Access rights can be managed directly in real time via SuccessFactors. jay cloud runs on the SAP Business Technology Platform, communicates with the paired dormakaba time and

access devices and supplies them with the personal master data and access rights. The time and access bookings recorded on the peripherals are stored in SAP IoT (Internet of Things) services and are available for detailed evaluation.

Cloud

OnPremises

Overview of key benefits

Direct integration into SAP SuccessFactors Employee Central

Access rights are automatically assigned according to employees' roles and functions within the company. Should their roles change, the employees' access rights will automatically change instantly too.

Standard graphical user interface

Users keep their familiar graphical SAP SuccessFactors interface. Access is always possible from anywhere – via PC, tablet or smartphone.

Based on the SAP Business Technology Platform

jay cloud helps your company to digitise its time recording and access management systems. The Software as a Service (SaaS) application is based on the SAP Business Technology Platform and meets the highest requirements for IT security. Your applications are kept up-to-date automatically.

Worldwide service and sales

We guarantee worldwide service through our dormakaba sales offices, our partner concept, and our cooperation with SAP and SAP consulting firms.

Easy device integration

Access control hardware, time recording terminals, digital locking systems and identification technologies such as RFID, mobile access and biometrics are conveniently connected and centrally managed via the SAP IoT interface.

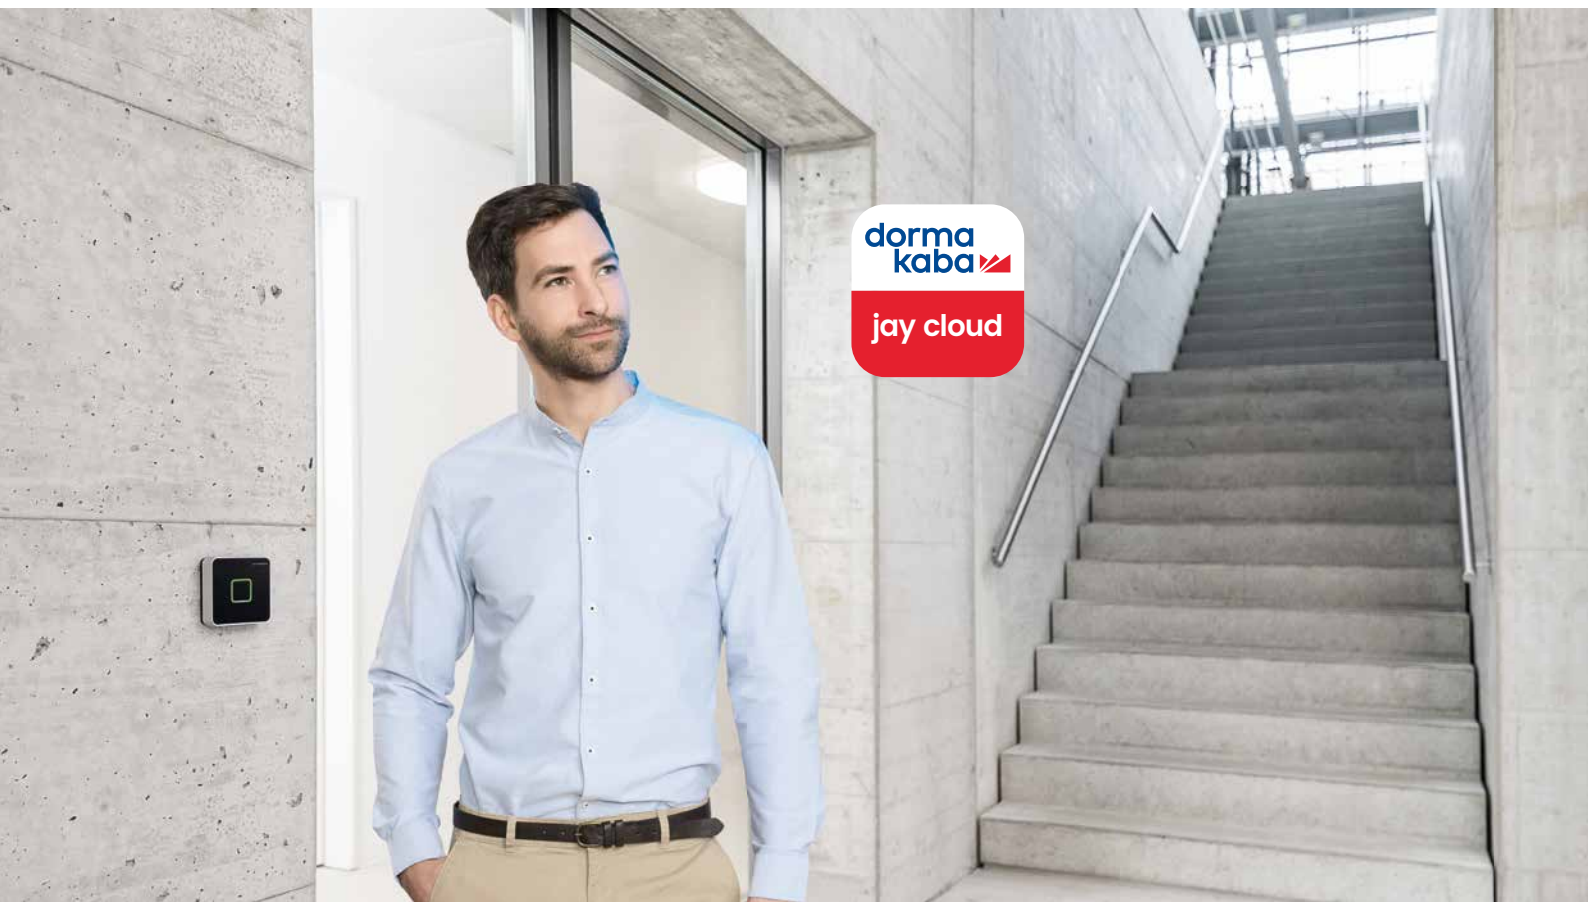

Investment security and sustainability

SAP is the world's leading provider of ERP software. dormakaba is the leading manufacturer of security solutions. The two companies are renowned for their innovative power, customer centricity and long-term strategies. jay cloud is certified by SAP. Interface release capability is guaranteed.

Multiple requirements, one-for-all solution

Easy operation, maximum flexibility and security – jay cloud facilitates access control and time recording significantly and gives you peace of mind, knowing that you have everything under control. From HR to IT and security and from the boardroom to every last person in the company.

Benefits for the management

- More security and transparency, less cost
- A central, international and company-wide solution
- High investment security and sustainability
- jay cloud is part of the SAP digital strategy

Benefits for HR managers

- All time recording and access processes can be controlled directly and automatically in SAP SuccessFactors
- Reduced personnel administration costs
- No duplicate master data maintenance
- Reduced workload thanks to ESS (employee self-service) functions
- Familiar graphical SAP SuccessFactors user interface

Benefits for IT managers

- Full control thanks to a standard system– fewer interfaces, no island solutions
- Efficient use of SAP systems and infrastructure
- SAP IT security
- Reduced effort for maintenance, support and training
- Competence and scope for action within the SAP system
- Flexibility and expansion friendliness

Benefits for security managers

- Intelligent and scalable access management system with a variety of functions and interfaces for additional systems
- Centralised monitoring – data are always current
- Constant access to the system from anywhere
- Increased security for buildings, people and IT
- Integration of the entire dormakaba innovation portfolio including mobile access
- Comprehensive media management - RFID, biometrics (finger, hand vein or face recognition), mobile access

Benefits for employees

- Easy-to-use access components and time recording terminals
- Employee self-service functions
- Web terminal, authorisation requests and time corrections
- Fast and flexible issuing of authorisation rights
- Familiar graphical SAP SuccessFactors user interface

The two jay cloud modules

Access

Employee access authorisations are controlled directly and in real time in SuccessFactors. They are based on the employees' position and role within the company. Should their roles change, their access rights will automatically change instantly too.

The HR department or security officer can easily and conveniently define and assign rights in jay cloud.

The link via SAP IoT (Internet of things) services ensures smart reader-based passage through all types of access from simple doors to pedestrian flow control turnstiles and gates. These smart readers can be connected to other devices such as a video camera or sensors.

jay cloud offers an open platform concept for integrating interesting partner solutions. As add-ons to the dormakaba solution, partners offer their own apps such as visitor management, co-working space management and facility management.

Time

jay cloud time allows you to record working hours accurately and flexibly. The booking data are forwarded to the SAP SuccessFactors Employee Central Time Sheet for exact processing by payroll accounting clerks.

Times and activities are recorded on the spot – while out of or in the office, on the time recording terminal, via smartphone, in the browser or automatically when the door is opened.

jay cloud time provides a reliable basis for efficient time management, also for flexible working models, enabling you to keep track of time balances, absences and over-time.

Key apps at a glance

Time correction

This app displays all employee time bookings.

- Time events, and indirectly time pairs, can be changed as required.
- Once changes are saved, the modified time events are reordered and the time pairs updated.
- Booking data are automatically transferred to the SuccessFactors Time Sheet.

Web terminal

The web terminal works like a physical time recording terminal.

- Users tap on one of the tiles – in, out, break ... – triggering a real-time booking that the user confirms or cancels on the next screen.
- All the day's entries are displayed – optionally also including balances.
- The recorded time events are automatically processed in the jay cloud time processing service and in the SuccessFactors Time Sheet or other connected time management system.

Booking monitor

This function can be used to retrieve overviews, reports and evaluations of all time and access bookings. The following booking evaluations are available:

- All time pairs and time events – also person-based
- Shift report
- Time events in the terminal view
- Access bookings

Evacuation list

This list provides a fast overview of the people located in a certain area in emergency situations.

- It is based on the latest access bookings of all persons.
- The lists can be printed out or sent to an e-mail distribution list such as the fire service.
- The lists can be used at the collection point to account for people.
- If a tablet is used, employees can be manually tagged as "evacuated"/"in a safe zone" at the collection point.

Presence board

Overview of the presence status of all employees and external persons.

- The status is based on the latest time or access bookings.
- The overview can be restricted to specific rooms, zones, buildings or locations.

Admin apps – link to SAP master data

Master data management

Master data management provides users with an overview of the company's entire hierarchical organisational structure, which they can use to create and track objects and trace their relationships to one another in a tree structure.

- The data are displayed in a table view.
- Master data management offers multiple sub-applications – related to buildings, people, times, profiles, media, devices, visitors, zones, work relationships, or users and roles.
 - Site management
 - People management
 - Time recording management
 - Profile management
 - Media management
 - Device management
 - Access management for externals
 - Zone management
 - Work relationships
 - Map editor
 - User and role management

Employee management

This app is designed primarily for HR managers and employees.

- HR managers can use the app to quickly and easily assign access profiles and identification media for employees, as well as to manage their data, media and access rights.
- Employees receive a quick overview of the relevant master data, current and future access authorisations as well as ID cards and other access media.

Hardware components for jay cloud

IoT Box

The IoT Box connects the dormakaba access and time recording hardware to jay cloud via the SAP IoT (Internet of things) services. This enables the current infrastructure to be used without having to install a local server.

Time recording

The small dormakaba terminal 96 00 with its touch-sensitive 4-inch display is designed for standard time recording tasks. The dormakaba terminal 97 00 with its

7-inch display and multiple options is suitable for users looking for more than just time recording.

Access control

Hardware solutions for access control include components such as access readers, electronic and mechatronic door fittings, and a wide range of media.

Open to third-party systems

jay cloud is an open modular system. Third-party systems such as visitor management, alarm systems, video management and building information systems can be

-  Visitor management
-  Life and safety
-  Video management
-  Parking management

easily integrated and orchestrated via the SAP Business Technology Platform.

-  Canteen solutions
-  Building Management
-  Room reservation
-  Utilities/remote site access

Visitor management with jay cloud and TDS Visitor

TDS Visitor is a leading digital visitor management solution that covers the entire visitor life cycle while providing a single view of visitors across multiple locations in a company.

The system optimises the visitor process and manages the entire visitor life cycle from entry to exit.

Emergency and rescue management with jay cloud and TDS Life Safety

jay cloud communicates with the connected time and access equipment as well as the evacuation terminals and supplies them with personal master data and access authorisations.

TDS Life Safety ensures optimum rescue planning and management. In the event of a building evacuation, the system provides proactive counting functions using smart technology to account for people and ensure real-time tracking of missing persons.
